Challenge

With a goal to develop the next generation of field training solutions using mixed reality technology, Ascanio needed to ensure the analytics portion of the solution was equally cutting edge. They required UI components that delivered the most advanced data visualization, customization and data manipulation capabilities.

Telerik components provide the high-quality bricks we need to build the high-quality house."

Minas Kyriakou
CTO

Solution

Telerik ASP.NET Core controls that now support the new .NET MAUI development environment

1,250+ UI component library ensures Ascanio can build the functionality it needs

Cross platform support to quickly render on multiple platforms

Results

Front-end development time for websites cut by 50% while improving UI quality

Resources freed up for allocation to business-critical research and development

Top notch documentation and support keep developers on track and on time

Build powerful analytics into your application with Progress® Telerik® today!
