What's New & Awesome in Q3 2012?

A green square containing the text 'Q3' in a large white font, with '2012' in a smaller white font below it.

New and Awesome!

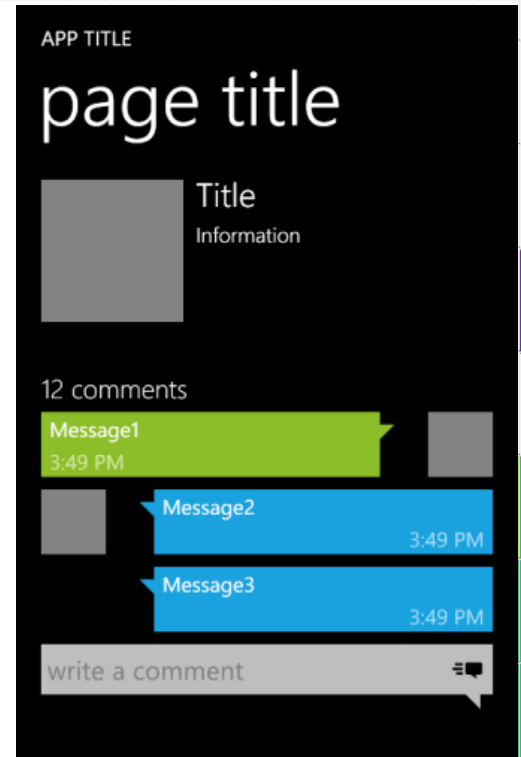

Windows Phone 7.5+

- 25+ New Design Templates
- Expander Control
- Input Prompt
- Time Span Picker
- Password Box
- Data Form
- Speech Recognition Support (Phone 8 only)
- Multi Resolution Image (Phone 8 only)

Q3
2012

25+ Design Templates

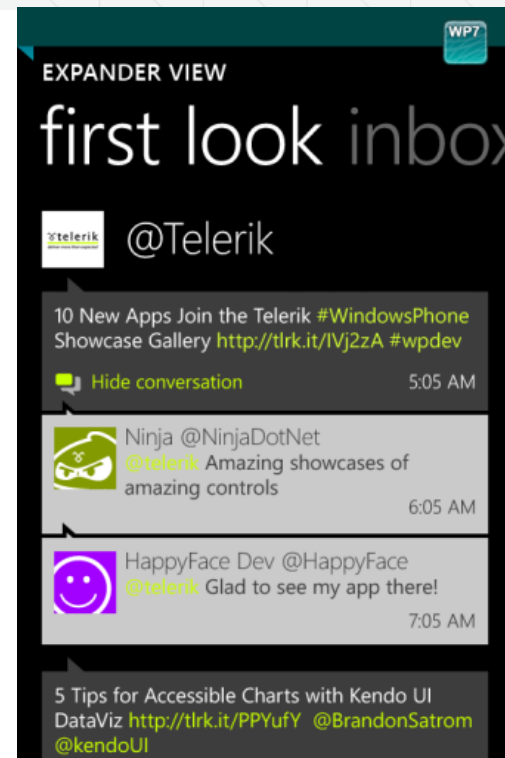

25+ Brand New Templates that incorporate RadControls for Windows Phone.

Q3
2012

Expander Control

The ExpanderControl enables you to create more interactive apps while letting you add more content to your apps and save space at the same time.

Q3
2012

Input Prompt

An extended Message Box component that can be used to gather user input like log-in information.

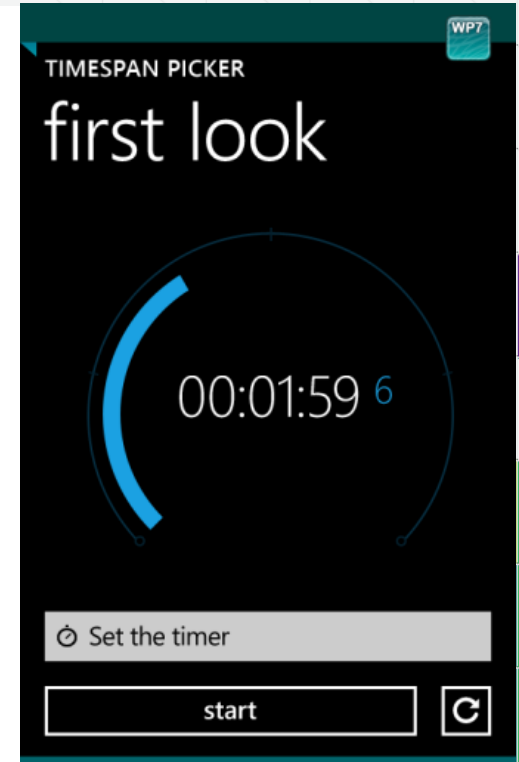

The image shows a dark-themed dialog box titled "Enter your age". Below the title is the text "Please enter your age to continue browsing:". There is a light gray input field. At the bottom of the dialog box are two buttons: "ok" and "cancel".

Q3
2012

Time Span Picker

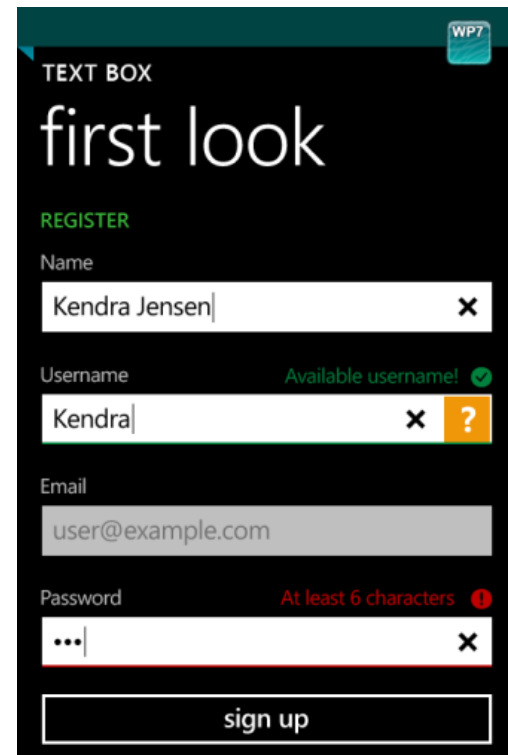

A new Date/Time Picker inspired control that can be used to select TimeSpan values (durations).

Q3
2012

Password Box

RadPasswordBox can be used to gather/obtain user passwords and provides some nice out-of-the-box features like support for custom action-buttons and "show password" functionality.

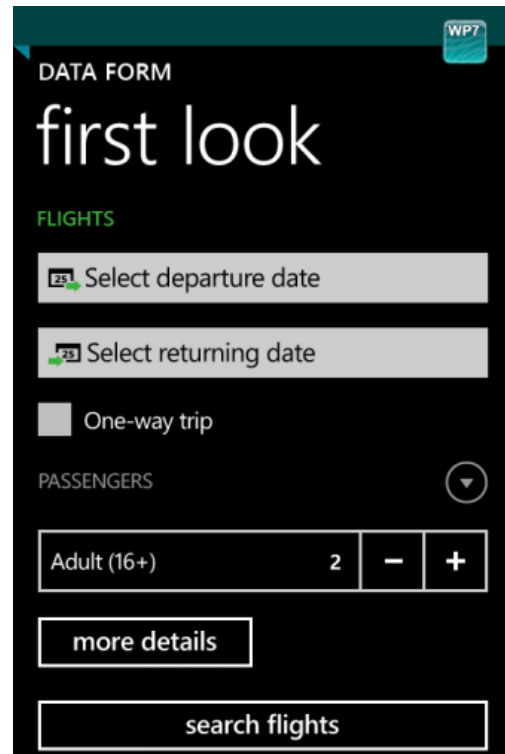

The screenshot shows a mobile application interface for registration. At the top right, there is a 'WP7' logo. The title 'TEXT BOX' is in the top left, and 'first look' is the main heading. Below the heading is a green 'REGISTER' button. The form contains four input fields: 'Name' with the value 'Kendra Jensen', 'Username' with the value 'Kendra' and a green checkmark indicating it is available, 'Email' with the value 'user@example.com', and 'Password' with a red warning icon indicating it must be at least 6 characters. Each input field has a clear button (X) and the password field also has a show/hide button (?). At the bottom is a 'sign up' button.

Q3
2012

Data Form

A brand new control that makes it easier for you to create input and editor pages for your business entities.

The screenshot shows a mobile application interface for flight booking. The title bar at the top is dark green with a white 'WP7' icon in the top right corner. Below the title bar, the text 'DATA FORM' is displayed in white, followed by 'first look' in a large, white, sans-serif font. Underneath, the word 'FLIGHTS' is written in a smaller, green, sans-serif font. The interface features two date selection fields: 'Select departure date' and 'Select returning date', each with a calendar icon on the left. Below these is a checkbox labeled 'One-way trip'. The 'PASSENGERS' section includes a dropdown arrow on the right and a row with 'Adult (16+)', the number '2', and minus/plus buttons. At the bottom, there are two buttons: 'more details' and 'search flights'.

Others for Windows Phone 8

- *Speech Recognition support* – End-users can navigate and interact with your app using their voice.
- *MultiResolutionImage* control – Telerik RadControls makes it easy for developers to display the appropriate images in their apps.
