Instructions on how to give permissions on the <u>r.a.d.editor</u> folder

<table>
<tr>
<td colspan="2" align="center">Internet Information Services v5.x
name of account: <b style="color:red">ASPNET user</td>
</tr>
<tr>
<td align="center">FAT32 file system</td>
<td align="center">NTFS file system</td>
</tr>
<tr>
<td valign="top">No need to give permissions on the r.a.d.editor folder.</td>
<td valign="top">

1. Right-click on the folder where you have installed r.a.d.**editor** and select **Properties**. By default, this folder should be named <u>r.a.d.editorX.X</u> and should be located in the C:\Inetpub\wwwroot directory.

2. Click on the **Security** tab. If you do not see the security tab, go to step 3. Otherwise, go to step 8.

3. The **Security** tab is not visible because you have *Simple File Sharing* enabled. You will need to disable it before you continue. To disable it, open a **Windows Explorer.**

4. On the **Tools** menu, click **Folder Options**, and then click the **View** tab.

5. In the **Advanced Settings** section, clear the *Use simple file sharing (Recommended)* check box (at the bottom of the list).

6. Click **OK**.

7. Right-click on the folder where you have installed r.a.d.**editor** and select **Properties**. Click on the **Security** tab.

8. Click on **Add** (to add a new user).

9. Type ASPNET and click on **Check Names**. ASPNET should underline (if it doesn't then you don't have Microsoft's .NET framework installed).

10. Click **OK**.

11. Select the account you have just created (it should be named aspnet_wp account) and check the **Full Control** box to give it full permissions.

12. Click **OK**.

</td>
